SUMMARY

AI-native full-stack and iOS engineer shipping production-grade mobile and web products for startups and clients, with deep experience in Swift/SwiftUI, Supabase, AWS, and modern cloud stacks. Builds complex social, real-time, and media-heavy apps end-to-end, leveraging tools like **Cursor and multi-agent workflows** to accelerate delivery without sacrificing architecture or code quality.

SKILLS

Languages: Swift, TypeScript, JavaScript, Python, SQL, Java, C#, C. **Frontend & Mobile:** SwiftUI, React, React Native, Expo, Next.js, HTML/CSS. **Backend & Data:** FastAPI, Node.js/Express, PostgreSQL, Supabase, SQLAlchemy, Sequelize, Django. **Cloud & DevOps:** AWS (Elastic Beanstalk, RDS, S3, Lambda, SES, SNS, Cognito), Docker, Vercel, Netlify. **AI/LLM:** RAG, ChromaDB, faster-whisper, ElevenLabs. **Tools:** Cursor, GitHub, Xcode, TestFlight, Figma, Expo, Stripe, RevenueCat

EXPERIENCE

Open Planner – Student Productivity Platform (25k+ users)

Los Angeles, California

Lead Software Engineer,

November 2025 – Current

Full-Stack Engineer

August 2025 – November 2025

- Lead engineer for the **web, iOS, and backend platform**, powering syllabus ingestion, grade forecasting, real-time collaboration, and subscription billing for students and parents.
- Architected a Node.js/Express backend on **AWS (Elastic Beanstalk, RDS Postgres, S3, Lambda, SES, SNS, Cognito)** with REST + Socket.IO APIs, syllabus parsing pipeline, and email/push automation.
- Built an **LLM-driven syllabus pipeline** where students upload PDFs/DOCX to S3 and a Lambda+GPT service extracts assignments and exams into structured planner data with content-hash caching.
- Designed **multi-tier subscription systems: Stripe subscriptions** for students, parent purchases with multi-seat claim codes, and **Apple IAP on iOS**, all unified with idempotent webhook handling and entitlement checks.
- Implemented a **grade prediction and “what-if” engine** (weighted categories, drop-lowest, extra credit, needed-score) surfaced through a React UI so students can see current grades and simulate outcomes.
- Led the native **iOS app in Swift/SwiftUI** (iOS 18.5 universal) with a custom API client, Keychain-backed auth, weekly planner/calendar views, syllabus upload with progress, StoreKit 2 subscriptions, local reminders, and APNs push.

Teragram Development

Remote

Founder & Lead Engineer

Feb 2025 – Present

- Founded an independent studio **delivering end-to-end mobile and web products** for non-technical clients, owning scoping, technical architecture, execution, and deployment for multiple iOS and cross-platform apps.
- Lead the build of **Rollin'**, a native iOS cannabis social platform with dual-camera capture, real-time messaging, map-based memories, and gamified rolling competitions, translating an early React Native prototype into a production-grade Swift/SwiftUI codebase.
- **Delivered ARMED**, a production iOS app for baseball players by transforming a no-code/AI-generated web prototype into a performant Capacitor-based app, implementing a real backend, refining the UX, and shipping to the App Store.
- Designed and began implementing **Sole2Stock**, an educational investing app that teaches financial literacy by mapping stock performance to sneaker culture, aligning product experience with the needs of Black and Latino students new to investing.
- Regularly interface with founders and non-technical stakeholders to translate ambiguous product ideas into actionable **specs, roadmaps, and technical designs**, supported by clear documentation and iterative demos.
- Standardized a modern engineering toolkit across client projects (Swift/SwiftUI, React Native, Supabase, AWS, CI/CD) and use AI-assisted development workflows to accelerate delivery while maintaining code quality and long-term maintainability.

WeBeGiggin'™ – Gig Economy Community Platform

Los Angeles, California

Founding Full-Stack Engineer,

July 2025 – Current

Full-Stack Development & Project Management Intern

July 2024 – June 2025

- Architected the mobile app with **Expo Router, React Native Reanimated, NativeWind**, and a 5-tab navigation shell, building 20+ screens and a dual-mode channel system that blends Reddit-style feeds with Discord-style chat on top of Supabase Realtime.

- Designed and implemented a denormalized **PostgreSQL schema (26+ tables with RLS, triggers, RPCs)** powering hot/trending feeds, hashtag discovery, full-text job search, and real-time messaging via WebSocket subscriptions.
- Designing **“Aqua,” a native in-app career agent** that uses an AI backend and function calling to act as a personal guide for each user, helping them refine profiles, surface relevant gigs, and navigate career growth directly inside the product rather than via generic chat.
- Represented WeBeGiggin’ at events and meetings, **pitching the product** to potential users and investors, gathering feedback, and collaborating with marketing to align feature roadmap, onboarding flows, and positioning with the target gig worker community.

Enact Insight

Los Angeles, California

Software Engineer Intern

May 2025 – August 2025

- Led the revitalization of **Pickl.tv**, a movie & TV recommendation platform, by reworking onboarding, frontend architecture, and backend integration, improving the signup funnel by **100% vs. the previous flow**.
- Developed and refactored interactive **React components**, mapped **Django views/templates/static** files to support the new frontend, and designed an integration plan to persist questionnaire results via Django models.

PROJECTS

ClockWork – AI Ghostwriting & Music Production Tool

Creator

Nov 2025 – Present

- Built a local-first web app that transforms a professional rap ghostwriter’s workflow, going from artist profiling and mumble melodies to structured lyrics and demo vocals using **RAG, local ASR, and multi-model AI orchestration**.
- Implemented a **Python/FastAPI backend (SQLite + SQLAlchemy + Alembic)** and **Next.js 16 + React 19 + TypeScript frontend with Tailwind**, custom audio recording hooks, and localStorage-based session persistence.
- Designed a **“mumble-to-grid”** pipeline using **faster-whisper, librosa beat analysis**, timing scaffolds, and Claude Sonnet 4 to generate rhythm-aware lyrics, plus a dual-LLM critic system scoring each bar and flagging off-brand content.
- Added **weighted RAG “Fusion Profiles”**, lock-and-regenerate bar editing, and an adaptive taste profile system that learns preferences from per-bar ratings and tags without retraining models.

Rollin’ – Social Networking App

Lead Engineer & Designer

April 2025 - Present

- Architecting **Rollin’** from the ground up, first as a **React Native prototype** and then as a **fresh Swift/SwiftUI rebuild** that keeps the Supabase backend but completely reimagines the native iOS 17+ experience for the 21+ cannabis community.
- Built a dual-camera **PiP capture engine** with AVFoundation, AVCaptureMultiCamSession, Metal compositing, and AVAssetWriter, supporting five capture modes with graceful thermal and device fallbacks.
- Implemented full **messaging (DMs + “Rotations”)** on Supabase with **PostgreSQL CDC Realtime, async streams**, and conversation lifecycle management, plus a four-layer MapKit experience (memories, friends, dispensaries, saved spots) with rich filtering and previews.
- Established a protocol-oriented architecture (MVVM + repositories + services) with a single SupabaseService boundary, 11 repositories, 8 state stores, and an AppContainer composition root for testable, dependency-injected modules.

ARMED – Youth Baseball Arm Health Tracker

Lead Full-Stack Engineer (Client Project)

January 2026 – March 2026

- Built and shipped a cross-platform **arm health and workload tracking app** for youth baseball players, parents, and coaches, published on the iOS App Store and backed by React 18 + TypeScript + Supabase.
- Unified **RevenueCat iOS IAP, parent subscription inheritance, and Stripe team plans** behind a single entitlement system, with Edge Functions and webhooks powering off-app team purchases that comply with Apple’s IAP rules.
- Hardened database security with iterative **RLS policies, SECURITY DEFINER helpers, and migrations**, and wrapped the SPA with Capacitor 7 for iOS with tuning for native UX and TestFlight/App Store distribution.

EDUCATION

Occidental College

Los Angeles, California

B.A. in Computer Science

- o **Related Coursework:** Data Structures & Algorithms, Advanced Programming (Intro to Software Engineering), Game Design, Computer Organization
